

Canadian Chamber of Commerce

Chambre de Commerce du Canada

INVITATION

AI: the missing piece of the productivity puzzle?

On the eve of B7 Summit in Rome, please join the Canadian Chamber of Commerce, partners and policy experts for an afternoon of thought leadership followed by a networking reception.

DATE & TIME: Wednesday, 15 May 2024, 4-8 p.m.

LOCATION: Villa Agrippina Gran Meliá, Via del Gianicolo, 3, 00165 Roma RM, Italy

Two years ago, the G7 set the aim for AI to help “deliver economic growth that maximizes the benefits of digital technologies”. Now, some countries are at risk of falling behind — or missing out on this opportunity altogether — with some starting to move much faster on AI adoption than others. This event will take stock of global trends in AI adoption, reflect on emerging best practice and opportunities, and consider what pathways can best help G7 policymakers realize the aim of unlocking a new, AI-enabled, productivity boom for their citizens.

As Canada takes on the G7 presidency in 2025, experts will weigh in on how future policy discussions related to AI business adoption should be positioned in order to enhance national productivity.
